

SUCCESS STORIES - SUMMARY

Project Name	Client	Brief Description	Key Analyses
Headcount Cost Modelling	Behavioral Healthcare provider specialized in Autism Spectrum Disorder (ASD) therapy	Developed a forecasting model to predict major P&L line items using multiple layered historical inputs.	<ul style="list-style-type: none">• P&L forecasting• Actuals vs Forecast variance analysis

HEADCOUNT COST MODELLING

ABOUT THE CLIENT

Client is a US based healthcare firm which provides behavioral therapy to children diagnosed with Autism Spectrum Disorder.

SITUATION

- Client had limited visibility into how the high attrition and hiring of their clinicians and technicians was impacting productivity, revenue and costs. They also wanted to gauge the impact of their hiring plan on site-wise contribution margin.
- Merilytics was brought on board to forecast the future profitability of each facility for various scenarios of headcount growth based on historical data.

VALUE ADDITION

- Developed an **automated model** that uses the current month actuals and historical trends of employee headcount, payroll data, training ramp up information and employee productivity to predict major P&L line items like site contribution margin, revenue and costs for the coming three months.
- Further broke down the change in employee headcount into changes in worked hours, scheduled/planned hours, billed hours, cancelled (patient therapy) hours and new employee training hours on a monthly basis, which resulted in granular visibility into headcount utilization and its impact on profitability.
- Performed a **sensitivity analysis** to gauge the impact of various levels of hiring and attrition rate combinations on site contribution margin.

IMPACT

- The forecasting tool aided the management in making **critical decisions regarding hiring trend and headcount growth** of the organization.
- Granular forecasts enabled the Management to identify the key sources of variances during their Monthly Operating Reviews.
- The sensitivity analysis helped the client to understand the **relationship between key growth drivers and P&L items** such as costs, revenue and site contribution.
