

RCM dashboarding suite

(Behavioral health provider)

Provided real-time visibility into the key metrics across the revenue cycle and provided insights into the high priority action items for the Utilization Review, Billing and Finance teams to mitigate leakages in revenue

Behavioral health provider needs RCM dashboarding suite

Picture this...

You're looking to provide real-time visibility into the key metrics across the revenue cycle and provide insights into the high priority action items for the utilization review, Billing and finance teams to mitigate leakages in revenue. Currently, you have limited visibility into the RCM cycle in terms of identifying the key trends and high impact action items for the RCM & finance teams to prioritize. Also, you need to reduce people dependency in getting any visibility, due to exits.

You turn to Accordion.

We partner with your team to provide real-time visibility into the key metrics across the revenue cycle and to provide insights into the high priority action items for the utilization review, billing and finance teams to mitigate leakages in revenue, including:

- 1) Building utilization review dashboard to track authorizations and denials related KPIs and help deep-dive into the patient-level UR details
- 2) Providing visibility into total unbilled charges by patient discharge status and days since discharge to help the team prioritize the charges from billing perspective so that there are no delays in claims processing and collections.
- 3) Tracking claims by statuses along with the corresponding trends and help prioritize the team's efforts for handling rejected claims
- 4) Providing visibility into the AR aging, AR Roll-forward aging trends, its drivers and into the collection efficiencies
- 5) Tracking insurer and patient payments /refunds in the historic billing months and the previous day, their trends and drivers
- 6) Estimating Customer Financial Responsibility to identify the top admits/ discharges driving the outstanding ECFR for action
- 7) Enabling the existing data warehouse to be a single source of truth by setting-up python-based data pipelines and automating claims and billing data ingestion from third party sources via APIs and web scraping

Your value is enhanced.

- Reduction in rejected claims on a daily level by ~70% with improvement in clean claim rate by 2% through RCM dashboard suite
- The daily unbilled report helped prioritize the charges and helped reduce the unbilled charges post-discharge from ~\$4.5M to under a million USD
- You were able to single out the unused authorized days and act on unauthorized patient days to plug possible revenue leaks

RCM DASHBOARDING SUITE

KEY RESULT

- Reduction in rejected claims on a daily level by ~70%
- Reduce the unbilled charges from ~\$4.5M to under a million USD

VALUE LEVERS PULLED

- AR aging
- Utilization review

Executive RCM dashboarding suite for behavioral health facilities

Situation

- Client had limited visibility into their RCM cycle in terms of identifying the key trends and high impact action items for the RCM & Finance teams to prioritize. Also, they needed to reduce people dependency in getting any visibility, due to exits.
- Partnered with the client to provide real-time visibility into the key metrics across the revenue cycle and provide insights into the high priority action items for the Utilization Review, Billing and Finance teams to mitigate leakages in revenue

Accordion Value Add

- Built Utilization review dashboard to track Authorizations and Denials related KPIs and help deep-dive into the patient-level UR details
- Provided visibility into total unbilled charges by patient discharge status and days since discharge to help the team prioritize the charges from billing perspective so that there are no delays in claims processing and collections.
- Tracked claims by statuses along with the corresponding trends and help prioritize the team's efforts for handling rejected claims
- Provided visibility into the AR aging, AR Roll-forward aging trends, its drivers and into the collection efficiencies
- Tracked insurer and patient payments /refunds in the historic billing months and the previous day, their trends and drivers
- Estimated Customer Financial Responsibility to identify the top admits/ discharges driving the outstanding ECFR for action
- Enabled the existing data warehouse to be a single source of truth by setting-up python-based data pipelines and automated claims and billing data ingestion from third party sources via APIs and web scraping

Impact

- Reduction in rejected claims on a daily level by ~70% with improvement in clean claim rate by 2% through RCM dashboard suite
- The daily unbilled report helped prioritize the charges and helped reduce the unbilled charges post-discharge from ~\$4.5M to under a million USD
- Client was able to single out the unused authorized days and act on unauthorized patient days to plug possible revenue leaks

Methodology/ Approach

Input

- Claims data from the claims management system
- Billing data such as charges, payments, patient inflow, etc. From billing system (s)
- Authorization details of insurance claims (utilization review data)
- Admits data

Analysis

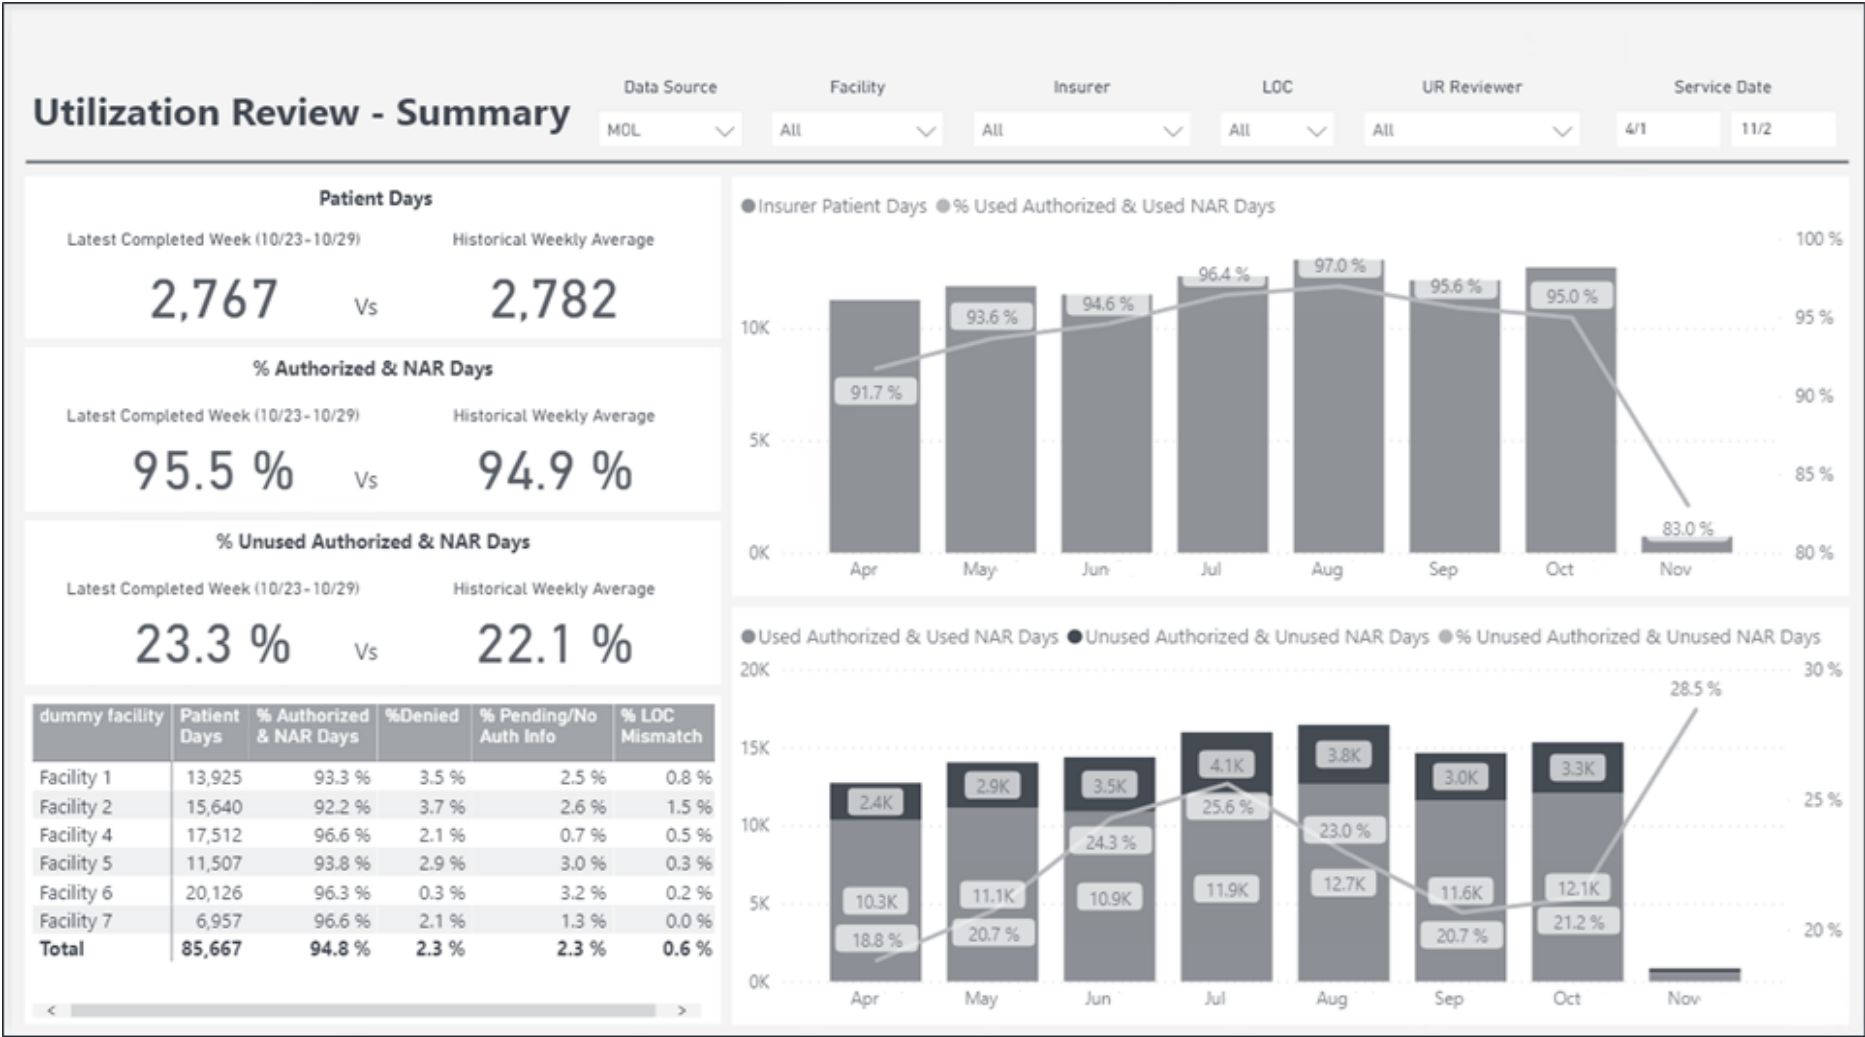

- Calculate the AR days using the net average daily collectibles made in the last three months and use the values to estimate the number of days it would require to cover the remaining balance
- For the cash collection dashboard, calculate the net payments(sum of payments and refunds) received either from insurer or patient
- For the UR dashboard, calculate the number of patient days, denied days, authorized days, NAR days, pending days, etc. Using authorization data
- For claims analysis, calculate the claims submitted, claims rejected, clean claim rate and other claims-related kpis

- The RCM scorecard involves analysis of claims, billing and authorization data
- As a first step, an automated process is built to extract the data from the MOL/Allscripts billing systems, salesforce leads, and waystar claims management system
- This data is then cleaned and stored as various data tables in the database. Relevant fields from these tables are used in building automated dashboards for the RCM scorecard.
- Data validation with the clients is done based on front-end reports from EHR systems
- Aligned the wireframes and the KPIs to be captured in each of the dashboards of the RCM and developed the same using the respective tool

Utilization review (UR) (1/3)

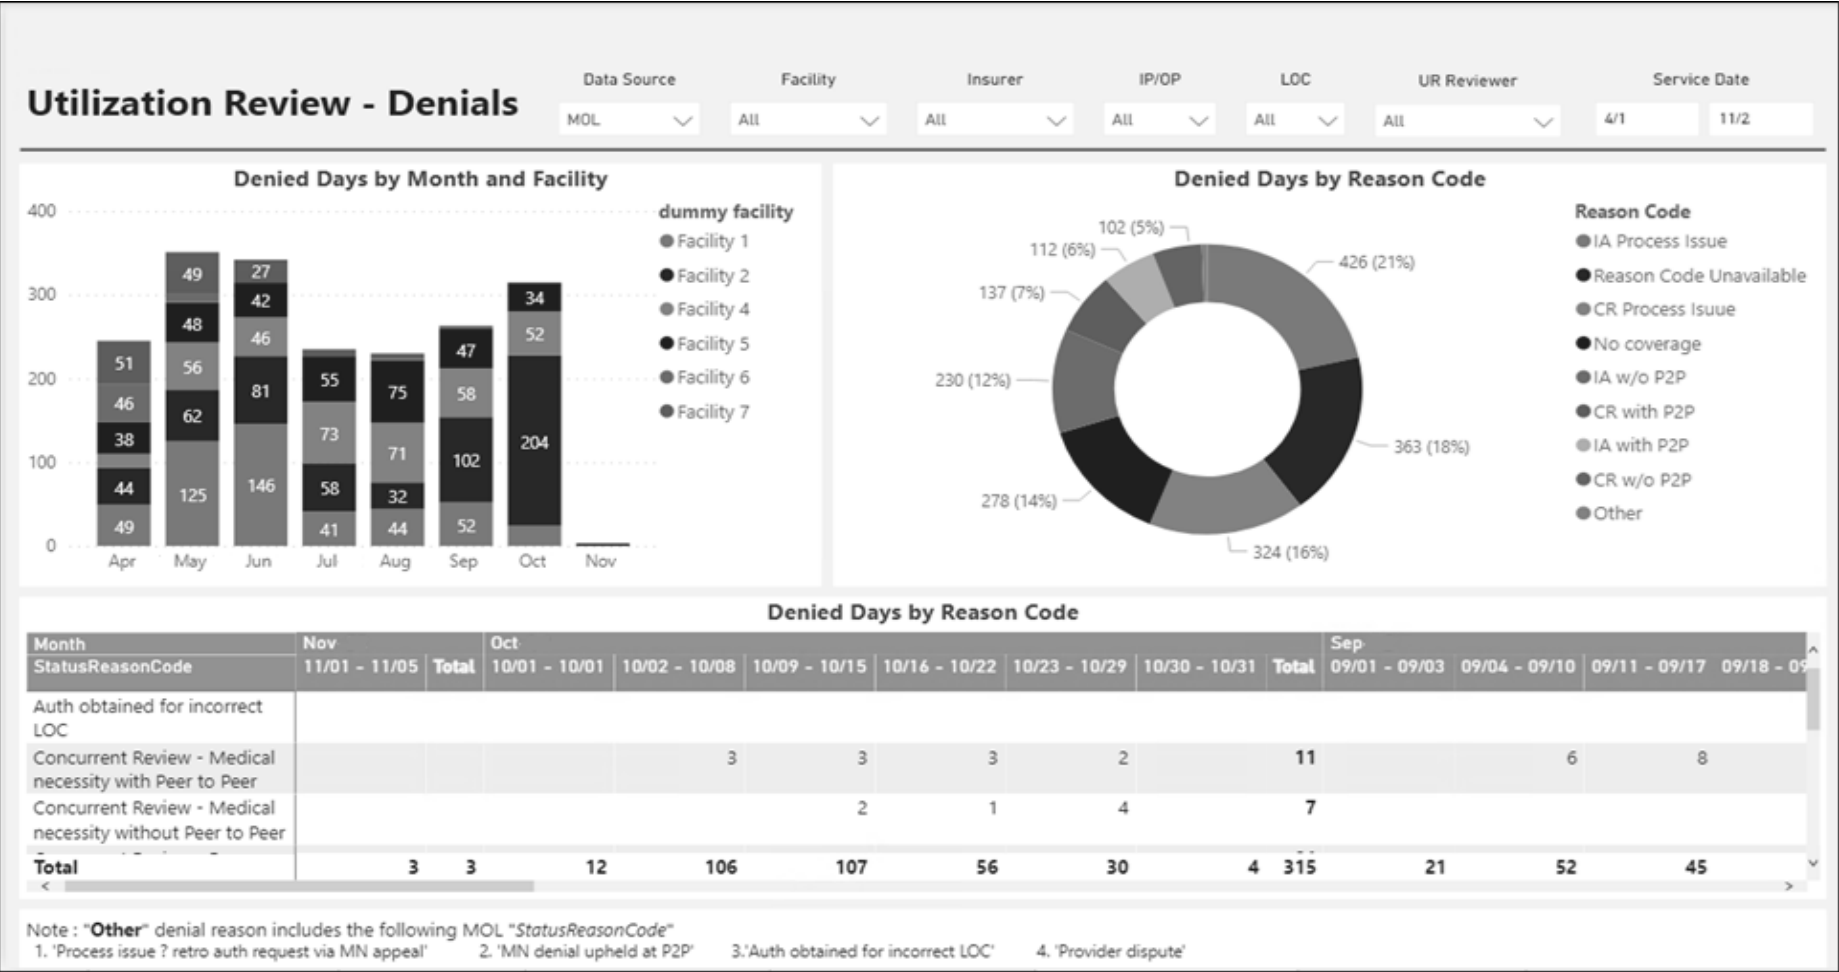

Review Authorization %'s for the latest completed week and compare with historical averages along with the corresponding trends. Review trends in unused Authorized days

Utilization review (UR) (2/3)

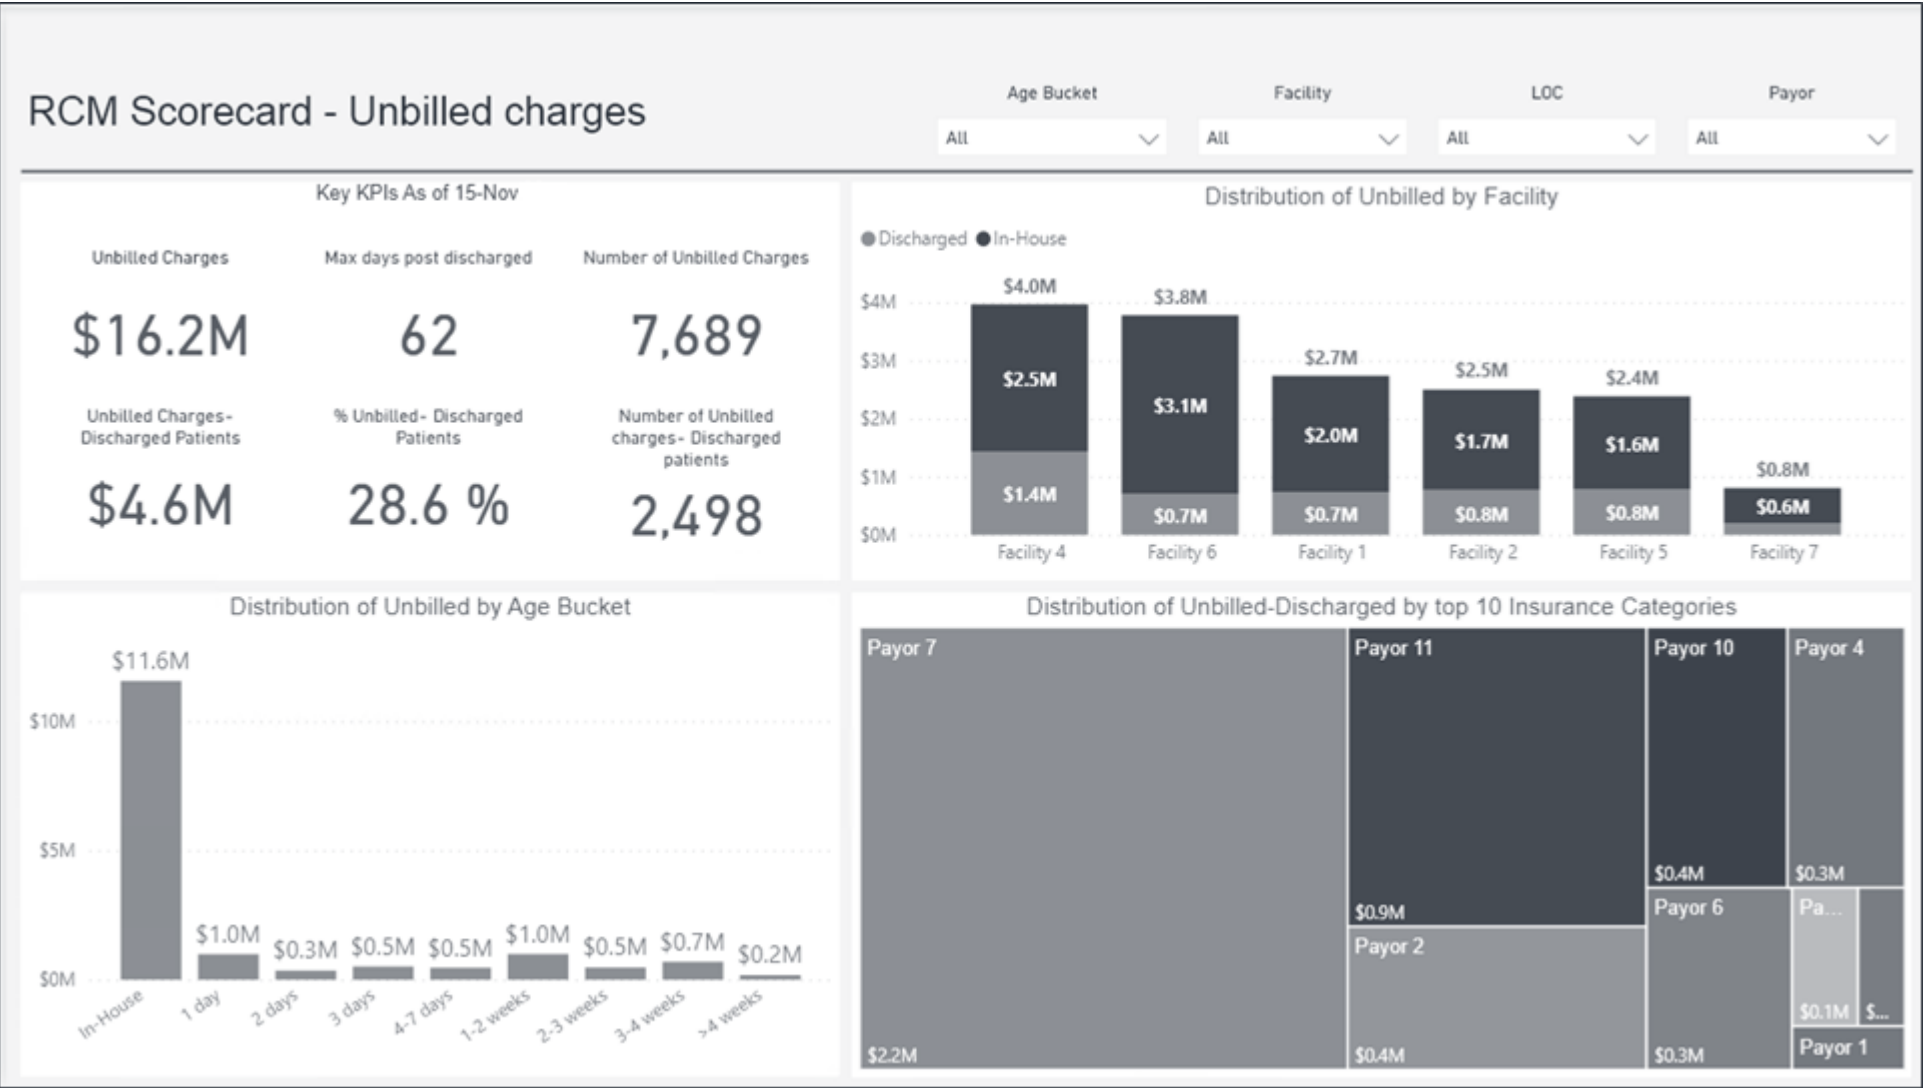

UR Summary

UR Denials

UR Details

Unbilled charges (1/2)

Track the charges/vouchers for which services have been rendered but are not billed in the system. It also helps in identifying the key drivers for the client to take action to help improve their collectibles.

Unbilled charges (2/2)

Identify the top-10 Admits that contribute to the highest Unbilled Charges for prioritization. Also identify the oldest unbilled charges in the system for action

Claims analysis

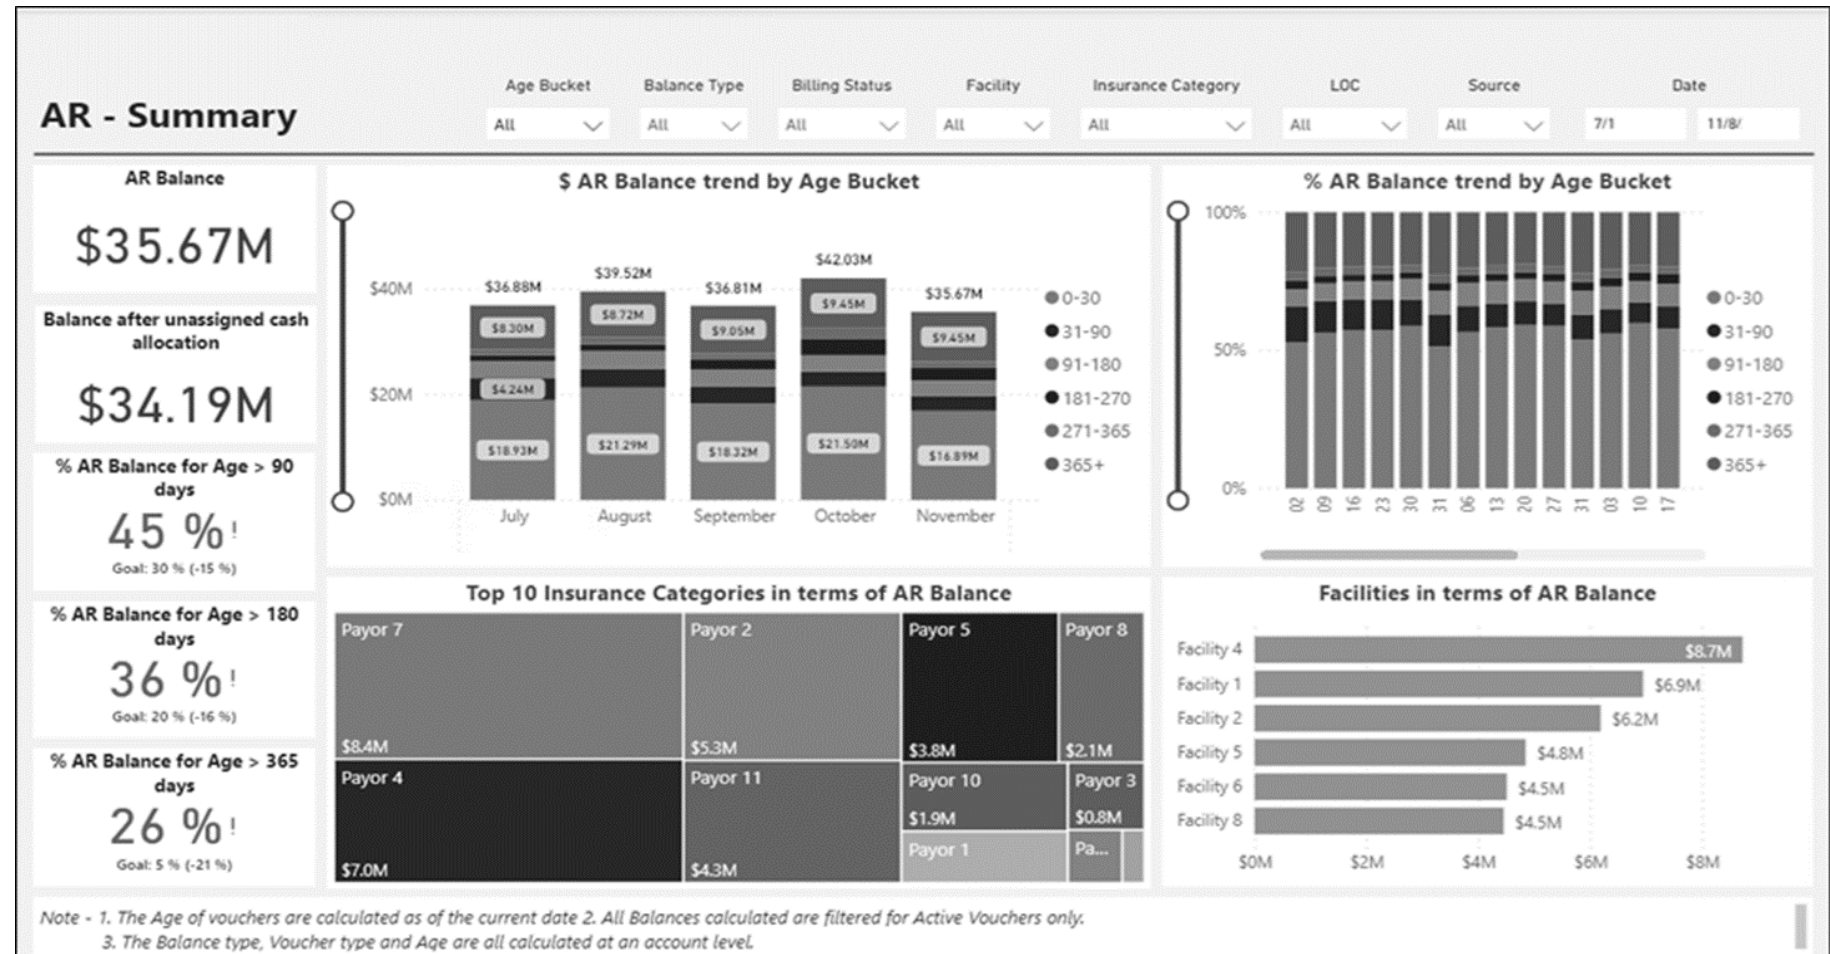

The Claims Monitoring dashboard tracks the # and \$ value of claims that have been submitted by the client, accepted by the clearing house, rejected/denied or approved by the payor and their subsequent details. Also helps track the clean claim rate to help the team for the executive leadership to track operational efficiency.

Accounts receivables (1/4)

AR Summary

AR Days

AR Roll-forward

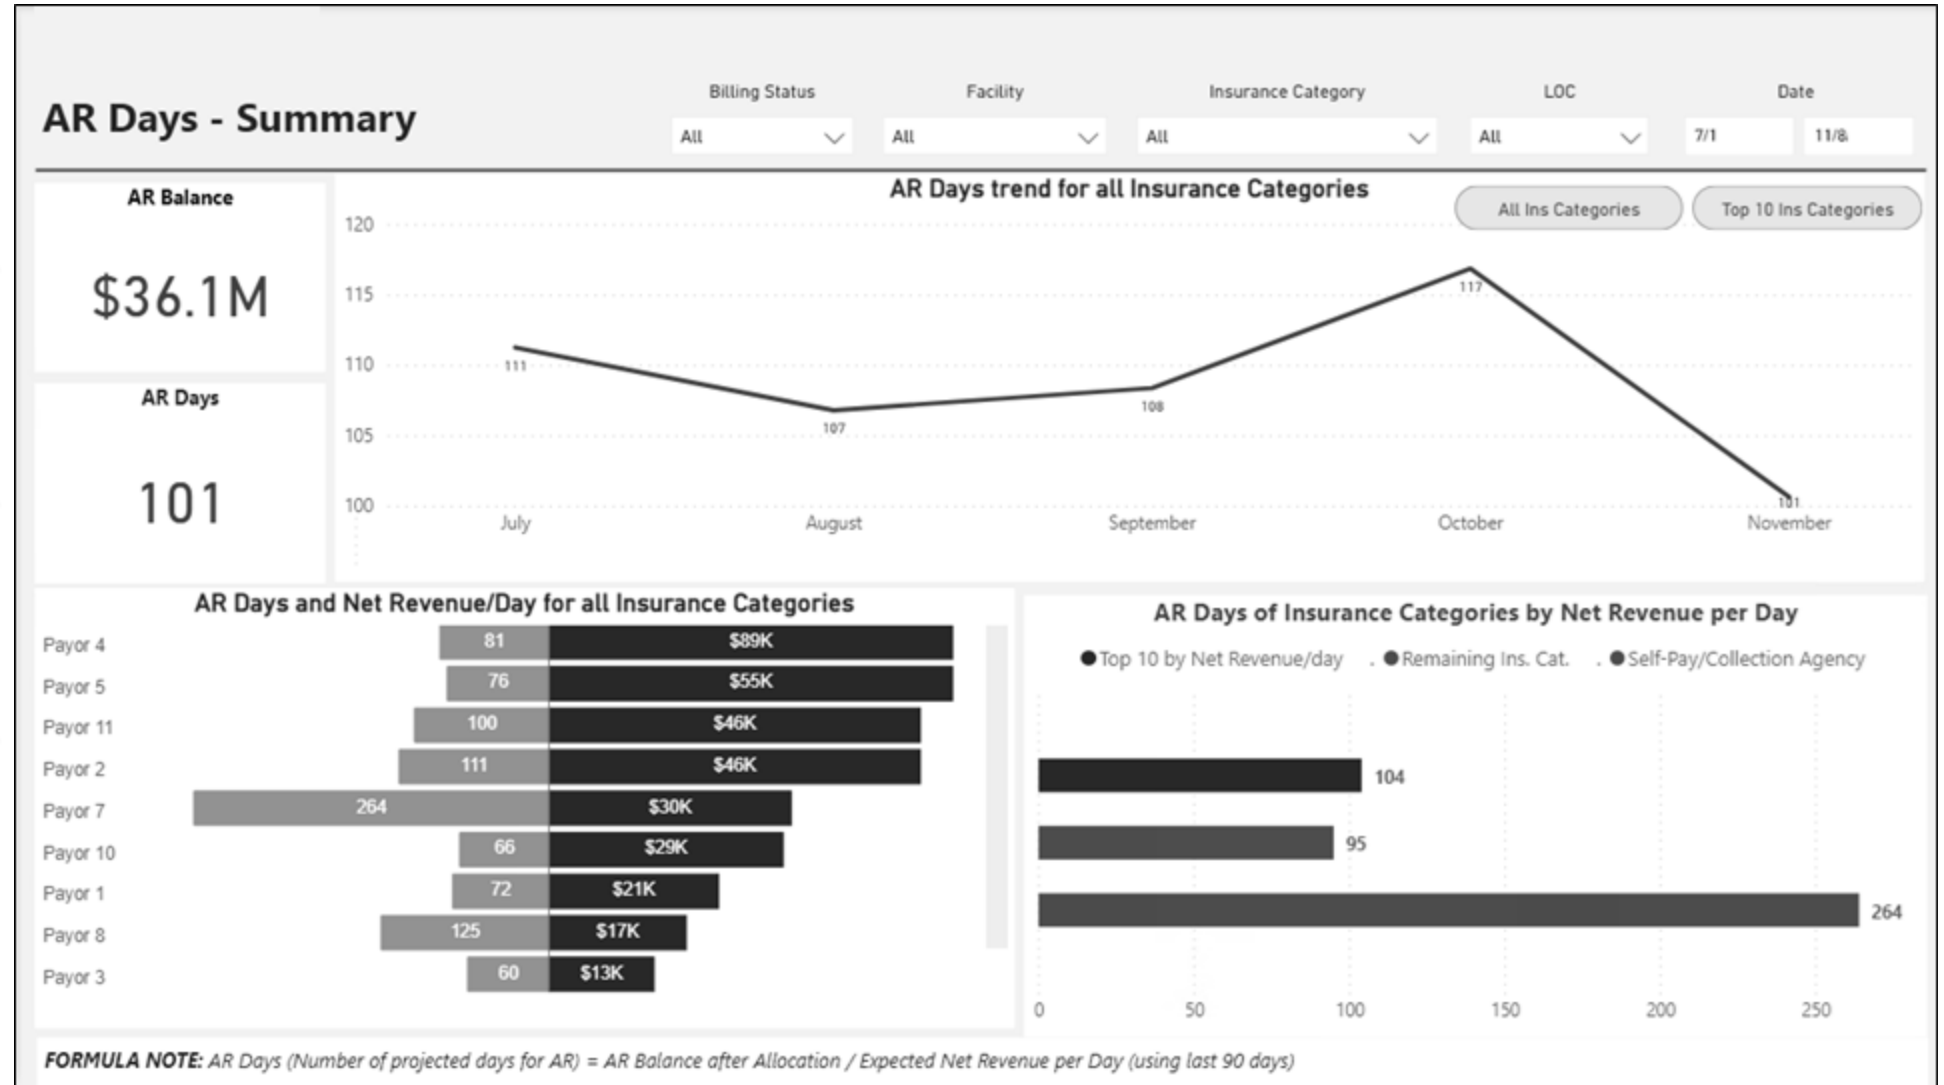

Get a quick snapshot of whether the AR aging meets the target/ performance requirements. Identify whether the trends in high aging buckets is decreasing over time. Identify the top payors responsible for the pending AR.

Accounts receivables (2/4)

AR Summary

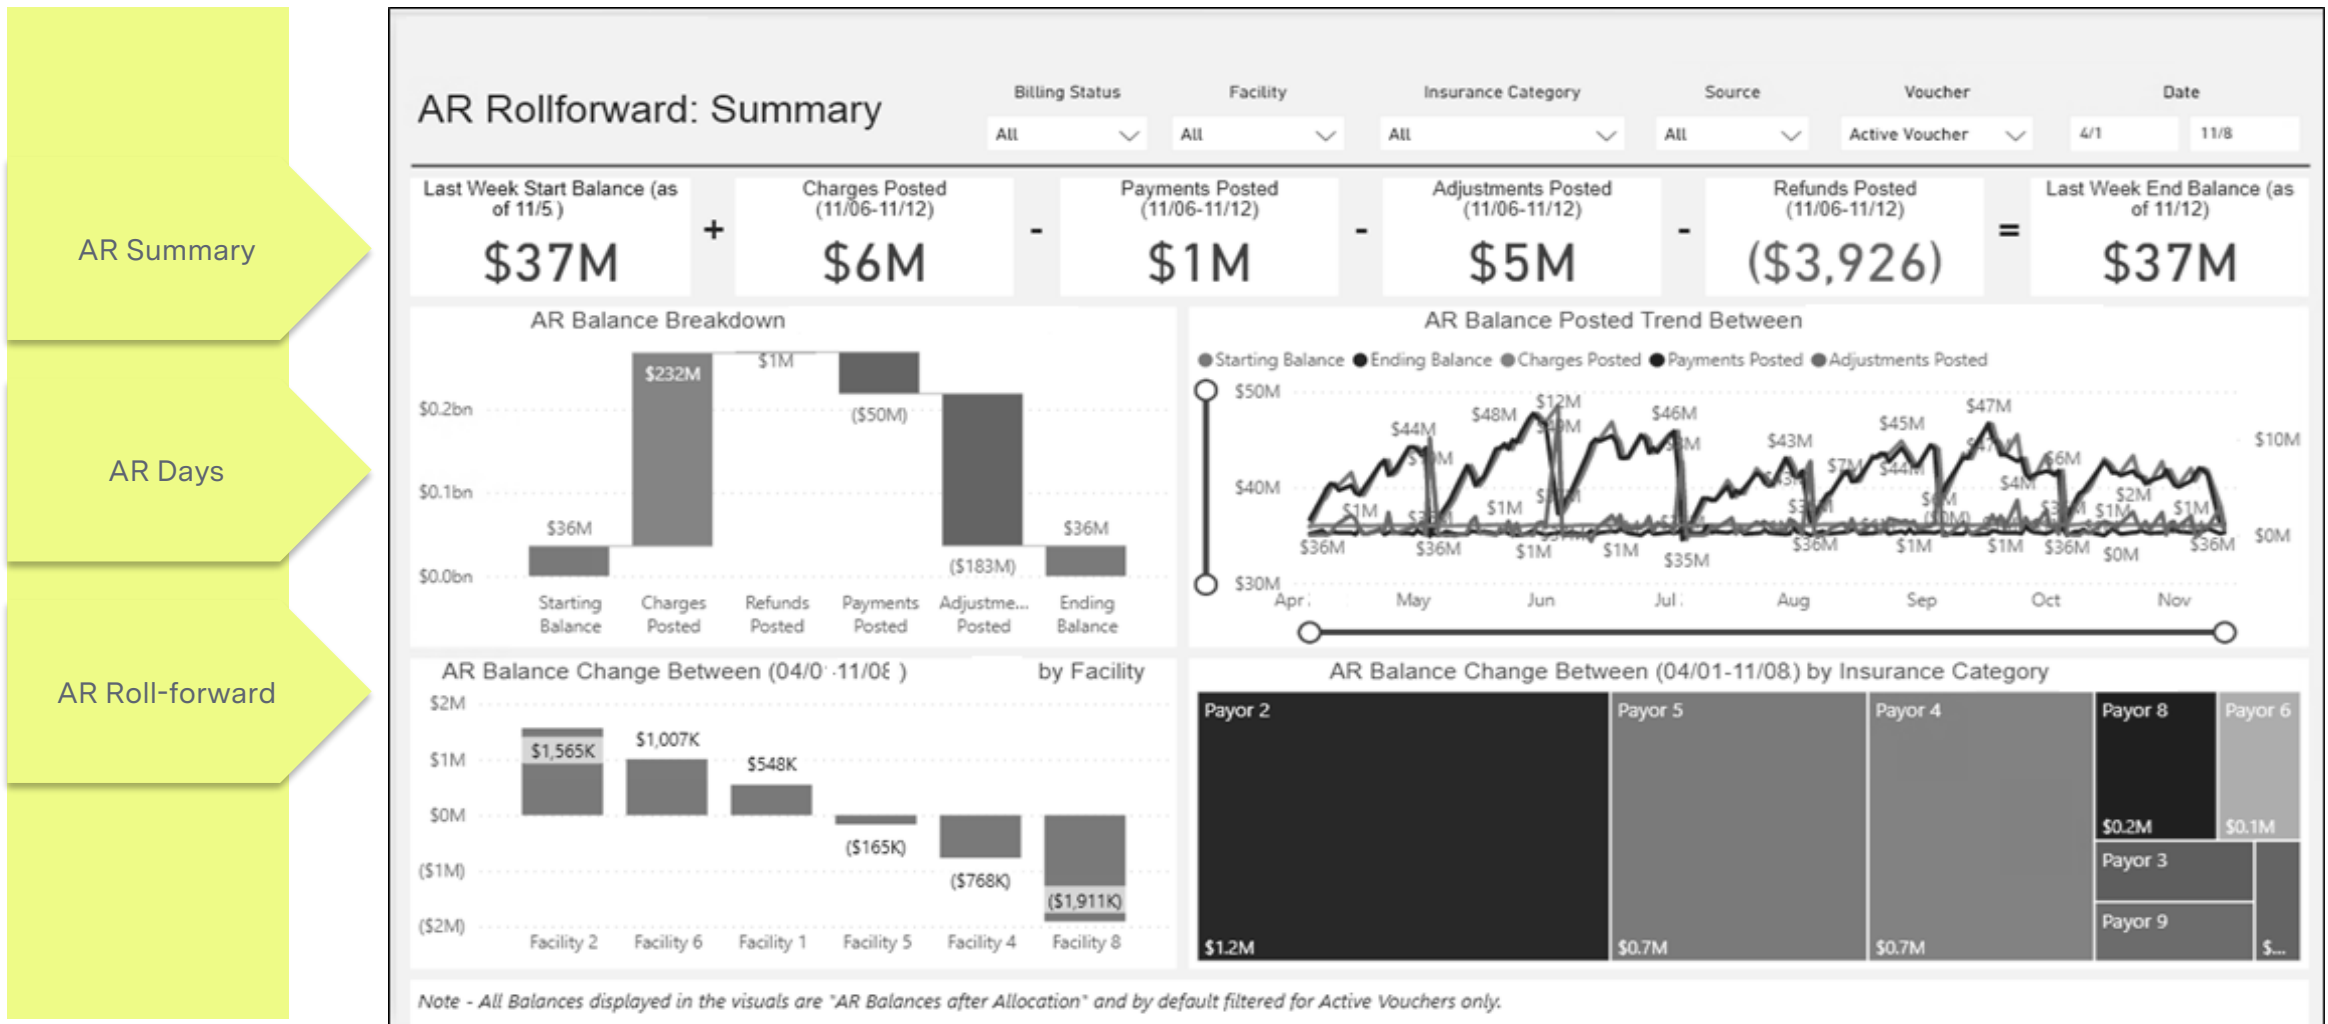

AR Days

AR Roll-forward

Trends in AR Days to see operating/ collection efficiencies i.e., whether it is improving or deteriorating.
Review the AR days for top 10 payors to get a representative metric for the entire business

Accounts receivables (3/4)

Review the AR that rolled over on a week over week basis or between any selected period along with the drivers for the roll forward i.e., at a facility or payor level. Review the waterfall break up of AR change

Estimated customer financial responsibility (ECFR)

Insights into the collectibles from the patients that do not have a payment plan and track the percentage ECFR outstanding on a daily/weekly/monthly cadence. Identify the top 5 patients contributing to the highest ECFR outstanding for action.

Cash collections

The Cash collection dashboard helps the team to track the distribution of total payments received by facilities, payors segregated by age buckets on a daily cadence. Track the distribution of payments by age to understand whether the payments received are for recent vs older services by payor
